

ROHAN DESAI

DevOps Engineer | Site Reliability Engineer

+91 8970143354 | rohandesai216@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

DevOps Engineer / Site Reliability Engineer with **4+ years** building and running highly available cloud infrastructure for millions of users. Cut cloud provisioning time from days to minutes through IaC and automation, and improved deployment frequency by modernizing CI/CD pipelines. Strengthened security and disaster recovery posture, and reduced incident resolution time by building AI-assisted monitoring agents with Claude alongside end-to-end observability. Known for turning manual, error-prone processes into reliable, self-service systems and reduces vulnerabilities via DevSecOps while sustaining 99.9% uptime.

SKILLS

- **Cloud & Networking (AWS):** EC2, ECS, EKS, S3, RDS, ElastiCache, VPC, Route 53, IAM, Lambda, DynamoDB, Secrets Manager, Athena, SNS, Amazon MQ, Elastic Load Balancing (ELB), Auto Scaling.
- **Infrastructure as Code & Config Management:** Terraform, AWS CloudFormation, Ansible
- **CI/CD & GitOps:** GitHub Actions, Jenkins, Git, ArgoCD, Helm, Artifactory.
- **Containers & Orchestration:** Docker, Kubernetes, Amazon ECS/EKS,
- **Monitoring & Observability:** Prometheus, Grafana, Datadog, Dynatrace, CloudWatch, OpenSearch, FluentD, Quantum Metric
- **Security & DevSecOps:** IAM (least privilege), STS/SAML, HashiCorp Vault, AWS Secrets Manager, AWS KMS, TLS, Wiz, SonarQube, Trivy, Gitleaks, Shift-Left Security, Vulnerability Management.
- **Scripting & Languages:** Python, YAML.
- **Site Reliability Engineering (SRE):** CI/CD, Infrastructure as Code (IaC), High Availability, Disaster Recovery, Incident Management, Cost Optimization, Scalability, Automation, GitOps, DevSecOps.

EXPERIENCE [4 Years]

DXC Technology — Bengaluru, India

DevOps Engineer — United Airlines Mobile Application

09/2023 – Present

- Cut new service provisioning from days to minutes (95% faster), by standardizing Infrastructure as Code in AWS CloudFormation and building Python template-generation tooling for AWS environments (EC2, ECS, RDS, ElastiCache, VPC, Route 53, S3) serving millions of users at 99.9% uptime.
- Operated 25+ containerized .NET microservices on Amazon ECS with Docker across 4 AWS accounts and 2 regions, by integrating AWS Lambda, AppSync (GraphQL), Neptune, DocumentDB, ElastiCache for Redis, Amazon MQ, DynamoDB, and SNS, with Kong API Gateway and Kuma service mesh handling API traffic and blue/green deployments.
- Increased release frequency from weekly to multiple daily deployments with rollback under 2 minutes, by building GitHub Actions CI/CD pipelines on self-hosted autoscaling runners with OIDC keyless cross-account auth, Artifactory image promotion, and automated rollback and image-tag validation.
- Remediated 90% of critical and high-severity vulnerabilities, by enforcing least-privilege IAM, cross-account STS/SAML authentication, and AWS Secrets Manager, and integrating Wiz (CSPM) and Gitleaks pre-merge secret detection into CI (DevSecOps).
- Reduced MTTR by 40% and ensured business continuity with an RTO under 15 minutes, by establishing observability with Dynatrace APM, FluentD pipelines to OpenSearch and Amazon CloudWatch, and Athena querying, plus multi-region failover with automated backups and one-command rollback.
- Saved 10 hours per week of operational toil and restored P1/P2 incidents in under 30 minutes, by building Claude Code AI agents for anomaly triage and post-deployment verification and delivering 24/7 on-call support.

DevSecOps Engineer — London Market Joint Venture (LMJV)

08/2022 – 09/2023

- Migrated 70 billion rows of data, 700 IT assets (including mainframes), and 200+ mission-critical applications to AWS with zero unplanned downtime, by automating high-availability provisioning across Production, DR, and Test environments on Linux using Terraform and Ansible.
- Reduced production deployment defects by 40%, by designing end-to-end CI/CD pipelines in GitHub Actions with Shift-Left security gates integrating SonarQube and Trivy to catch vulnerabilities before release.
- Sustained 99.9% SLA compliance during high-volume data operations, by running production-grade EKS clusters with Docker-containerized workloads and Helm-managed releases and building Prometheus and Grafana observability dashboards.
- Secured 70B+ rows of sensitive data and eliminated plaintext secrets across all microservices, by engineering automated AWS KMS key rotation and TLS encryption pipelines, centralizing secrets in HashiCorp Vault and AWS Secrets Manager, and automating drift detection with Python and Bash to cut AWS spend by 20%.

EDUCATION

Bachelor of Engineering (Mechanical) | KLS's Gogte Institute of Technology, Belagavi.

Graduated: 2022 | CGPA: 8.71

CERTIFICATIONS

- AWS Certified Cloud Practitioner (CLF-C02)
- Claude Certified Associate — Foundations (CCAO-F)
